

MAGNETIC COMPONENTS

Canline is specialised in manufacturing magnet aided conveying systems as turnkey projects, individual magnetic conveying devices and magnetic components to be built into the customer's own constructions.

Standard Magnetic Units in "built it yourself" form are available in a variety of strengths and designs which, if chosen correctly, will solve most magnetic conveying problems.

Besides a wide range of standard magnetic units, Canline makes special magnets in various strengths tailored to suit individual requirements and production needs.

Magnetic Sheet Separators were specially developed to permit easy and uninterrupted removal of steel sheets stacked horizontally or vertically. No more prying apart of greasy or oily sheets.

Magnetic Rollers Ø220 / Ø400 / Ø600
Canline produces several types of magnetic rollers for can conveying systems. The range covers most of the requirements for modern can handling. For special applications we produce tailor made rollers according to the customer's requirements.

For robotics and Pick and Place units
Light weight construction

Suitable for

- Glass jars
- Tin cans
- Many other applications

Available in

- Several sizes
- Individual switchable sections

Permanent magnets to handle steel products in a wide range of applications.
